

CHILDREN & COVID-19

Children can also get COVID-19 and can get really sick from it just like adults. The COVID-19 vaccines are our best protection against the virus.

Reasons To Vaccinate

- Help stop the spread of the virus
- Safer and better protection from COVID-19
- Stops COVID-19 from changing into other forms
- Helps children have a normal life

What About A Booster Shot?

Everyone ages 6-months and up should give their immune system a "boost" because the vaccines aren't strong enough over time.

Vaccination Locations

- Doctor's offices
- Pharmacies
- Community health fairs/events
- Community clinics

Scan the QR code to find the closest vaccination locations near you!
